DEPARTMENT OF HEALTH

1985 VITAL STATISTICS REPORT

ROBERT KERREY

GOVERNOR

Gregg F. Wright, M.D., M.Ed.
Director of Health

Stanley S. Cooper, M.S., Ph.D.
Director, Bureau of Vital Statistics

Report Prepared by:

Division of Health Data and Statistical Research
Mary Lou Eastman, M.S., Director

FOREWORD

Nebraska statute requires that records of birth, death, fetal death, marriage, and divorce be filed with the Bureau of Vital Statistics of the Department of Health. Approximately 60,000 records of vital events occurring in Nebraska are filed annually, and are added to the nearly five million such records already on file. Over 100,000 certified copies from those records are issued each year.

Responsibility for filing certificates of birth lies with the individual in attendance at birth, usually a physician. Funeral directors are responsible for filing certificates of death and of fetal death when burial takes place. Hospitals are to file fetal death certificates when hospital disposal is performed. County judges and district court clerks are, respectively, responsible for filing records of marriage and divorce.

The excellent cooperation of all the individuals mentioned is appreciated, and permits development of the tabulations presented in this report. Providing useful data stands as the goal of this report, and any questions or comments regarding the report, or requests for more detailed information, should be directed to:

INTRODUCTION

The information presented in this report is drawn from the vital records of the State of Nebraska. Records of events which occur in other states for Nebraska residents received through an Interstate Exchange Agreement are also utilized. The primary period covered is calendar year 1985, but selected data from previous years are also included. Data from 1985 records received after April 1, 1986 by the Bureau of Vital Statistics are not included in the tabulations in this report. However, the number of such records is minimal and their statistical effect negligible.

The congenital anomaly data presented in the report are taken from the Nebraska Birth Defects Registry, with the exception of the death data. Information for the Registry is provided by reporting personnel in approximately 100 Nebraska hospitals.

The state population figure used in the calculation of rates is 1,605,574, the 1985 estimate by the United States Bureau of Census. County, city, and balance of county populations used are Health Department estimates. U.S. vital event data, presented for comparative purposes, are provisional and are from the National Center for Health Statistics.

Characteristics of the population, such as its size and its age structure, can bear a great influence on vital statistics data. Only 30 counties and 12 cities in Nebraska had populations over 10,000 at the 1980 Census. Nine counties had less than 1,000 residents. In any area with a population under 10,000, wide variations in numbers or rates of events can appear from year to year, and no single year may be truly representative of the population. Counties with a high proportion of young people will show relatively higher birth rates and lower death rates than counties with greater numbers of older residents.

Information for towns having populations of 2,500 or more are included in this report, but information is available for towns where populations are 1,000 or more persons.

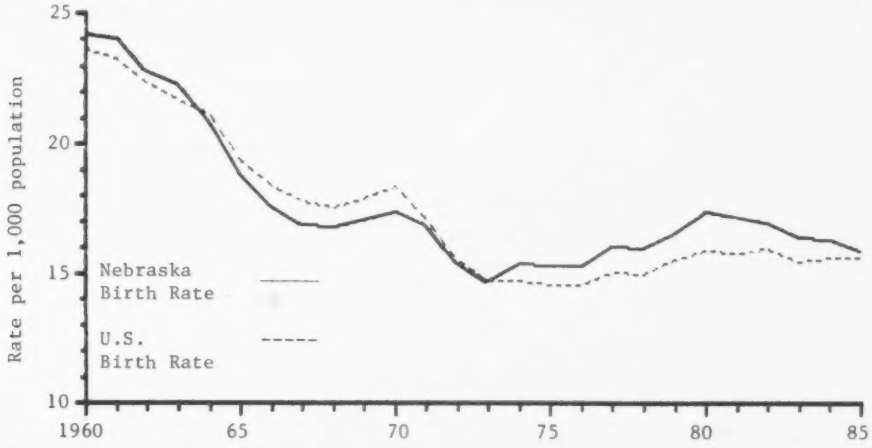
BIRTH OVERVIEW

Nebraska resident live births declined for the fifth consecutive year. This trend should continue for at least another ten years unless there are major changes in fertility patterns. The number of births decreased 2.1% to 25,540 from 26,099 in 1984. This is the lowest number of births since 1978. Nationally, the number of births and the fertility rate rose slightly in 1985 while the crude birth rate remained unchanged. The United States fertility rate was 66.1 live births per 1,000 women aged 15-44 years. Nebraska's estimated fertility rate dropped to 69.1 in 1985 from 70.9 in 1984.

The crude birth rate decreased 2.5% to 15.9 per 1,000 population from 16.3 in 1984, coming closer to the United States rate of 15.7. A comparison of Nebraska and United States rates for a twenty-five year period is shown in the graph below. Though Nebraska's rates have been both higher and lower than the national rates, their trends are similar.



Rates for counties within the State ranged from a high in Grant County of 30.5 to a low of 5.1 in Hooker County. Rates for towns of at least 2,500 population ranged from a high in Kimball of 21.3 to a low of 9.8 in Central City. These are good examples of the kind of variability that occurs when you have small numbers involved.

Most Nebraska births continue to occur in hospitals and are attended by physicians. In 1985 there were 93 (0.4%) births reported as not occurring in hospitals. This percentage is down slightly from 1984, but is the same as 1981-1983. The percent of births reported as not attended by a physician also declined slightly to 0.2% from 0.3% in 1984.

The educational level of both mothers and fathers is continuing to increase. The following table shows percentages for known cases. (The number of unknown cases is higher for fathers than mothers because the item is generally not reported on certificates of out-of-wedlock births, but trends should not be significantly affected.)

	MOTHER					FATHER				
EDUCATION	1970	1975	1980	1984	1985	1970	1975	1980	1984	1985
≤12 yrs.	81.6%	83.7	86.4	88.6	89.3	84.7%	88.7	90.6	92.6	92.7
≤16 yrs.	9.6%	14.0	16.1	18.4	18.6	18.6%	23.3	24.3	25.1	25.3

White births accounted for 89.2% of the births in 1985, down from 89.5% in 1984, continuing a slow decline that has been occurring for several years. Douglas county had the largest share of the non-white births, 52.2%, followed by Lancaster and Sarpy counties with 10.8% and 8.4% respectively.

Out-of-wedlock births continued to climb as has been the case since 1973 with the minor exception of 1983. The number increased by 3.9% over 1984 and the rate by 6.1%. While the percentage of white births which are out-of-wedlock is much smaller than it is for non-white, its increase has been steady and caused most of the out-of-wedlock increase this year. The percentage of out-of-wedlock births accounted for by each race or ethnic group and the percentage of births for each race which were out-of-wedlock are shown in the following table.

	PERCENT OF OUT-OF-WEDLOCK BY RACE				PERCENT OF RACE OUT-OF-WEDLOCK			
	1975	1980	1984	1985	1975	1980	1984	1985
White	64.9	68.5	67.1	69.5	6.2	8.8	10.5	11.6
Black	27.4	22.7	23.8	21.3	55.4	56.1	63.8	59.6
Indian	4.6	4.3	5.1	5.1	41.7	40.5	57.8	53.0
Mexican	3.0	4.1	3.6	3.6	18.2	16.2	17.5	17.9
All Other	0.2	0.3	0.4	0.5	2.4	4.3	5.2	6.5

For the first time in at least forty years and possibly ever, teenagers do not represent the largest age group for out-of-wedlock births. The average age of the mother of a first born out-of-wedlock child has increased to 20.6 years from 19.8 in 1984. Both in out-of-wedlock births and all births the older age groups are continuing to increase their percentage. The percentage distributions by age groups of mother for out-of-wedlock births and all births for five years are presented in the following tables.

OUT-OF-WEDLOCK BIRTHS

AGE	1981	1982	1983	1984	1985
Under 20	42.1	40.0	39.0	39.0	36.3
20-24	39.0	37.3	38.9	37.8	38.7
25-29	13.0	15.1	15.0	15.6	17.4
30 & over	5.8	7.6	7.0	7.7	7.6

ALL BIRTHS

AGE	1981	1982	1983	1984	1985
Under 20	11.3	10.5	10.0	9.7	9.1
20-24	34.5	33.8	33.3	31.6	30.6
25-29	34.5	34.8	34.0	34.8	35.9
30 & over	19.8	21.0	22.6	23.9	24.5

A combination of changes in number of persons in the age groups and fertility levels cause the changes in the distributions shown above. The next two tables also give evidence of these population and fertility changes with the population having the largest effect in the more recent years.

AVERAGE AGE OF MOTHER

AGE	1970	1975	1980	1984	1985
1st born	22.1	22.7	23.3	23.4	23.6
2nd born	24.7	25.4	25.9	26.0	26.3
3rd born	27.3	27.6	28.4	28.2	28.2

MOTHER'S AGE RANGE FOR BIRTH ORDER AVERAGES BY YEAR

	1.00 - 1.99	2.00 - 2.99	3.00 - 3.99	4.00 - 4.99	5.00+
1970	13 - 23	24 - 27	28 - 31	32 - 36	37+
1975	12 - 25	26 - 31	32 - 34	35 - 38	39+
1980	13 - 25	26 - 32	33 - 37	38 - 41	42+
1984	12 - 25	26 - 33	34 - 38	39 - 41	42+
1985	13 - 26	27 - 34	35 - 41	-	42+

The average number of pregnancies per woman having a live born child in 1985 remained at 2.4 for the third consecutive year. The average number of live born children per woman having a live born child remained at 2.1 for the fourth consecutive year. The frequency of high order births (here defined as five or more) has continued to decrease at a slower pace in the 1980's after rapid decrease during the 1970's. The number of high order births in 1970, 1975, 1980 and 1985 was 2655, 1238, 1005, and 894 respectively.

Low birth weights occurred in 5.3% of the births, down slightly from 5.4% in 1984. This percentage has been declining slowly, but steadily with two minor exceptions, throughout the 1970's and 1980's. For the fourth consecutive year, 2.0% of the birth weights were ten or more pounds. Prenatal care began in the first trimester of pregnancy in 80.2% of the births, up from 79.6% in 1984. The percent of mothers who had at least ten prenatal visits continued to increase to 70.6% from 68.1% in 1984. The percent of mothers who had no prenatal care remained at 0.6%.

There were 641 Nebraska resident births on which congenital anomalies were reported to the Birth Defects Registry for 1985. This figure represents 2.5% of the 25,726 live births and fetal deaths, an increase over the 2.2% reported in 1984.

Of the 641 cases, 20.9% were of low birth weight, while 5.3% of all live births were classified as low-weight. Twenty-four cases were stillborn, representing 12.9% of the fetal deaths. Only one defect was reported on 457 of the cases, while 91 had two, 42 had three, 18 had four, and 33 had five or more anomalies noted.

Christina was the most popular name given to girls born in 1985, while John was most frequently given to boys.

Out-of-State: A Nebraska resident giving birth or dying outside of Nebraska.

Non-Resident: A non-Nebraska resident giving birth or dying in Nebraska.

DEATH OVERVIEW

The number of deaths increased by 1.8% over 1984 to the highest number since 1974. The crude rate also increased to 9.3 per 1,000 estimated population which is the highest rate since 1976. Nationally, the rate remained at 8.7. In general, the Nebraska death rate is fairly stable since its range over the last sixty years has been between 8.8 and 10.4.

Within the state, 1985 county death rates ranged from a high of 16.2 in Webster County to a low of no deaths for Arthur County. Rates for towns of at least 2,500 population ranged from a high of 22.3 in David City to a low of 2.4 in LaVista. This is the position held by LaVista throughout the 1970's and 1980's.

The causes represented in the ten leading causes of death did not change from the previous two years, however, two of them changed places. Accidents moved down to fifth place and pneumonia moved up to fourth. Though accidents did decrease, the change was more a result of the 19.9% increase in pneumonia. Pneumonia tends to have wide variations from year to year. Chronic Lung Disease remained the sixth leading cause, but increased 36.3%. The number of suicides reached the highest level they have been since 1965. The last time there was a higher number was 1956. However, the rate, 10.9 was not as high as either 1965 (11.3) or 1956 (12.8). Cumulatively, the ten leading causes accounted for 82.4% of all deaths.

Heart Disease, the leading cause of death, declined by 0.8% and the rate declined by 0.7%. The United States remained the same as 1984.

The second most frequent cause of death, Cancer, increased by 0.6%, but not as sharply as in 1984. The rate again increased to a new high and remained above the national rate though the national rate did increase slightly as well. Bronchus and Lung is the most common site, but there was very little change from last year after last year's large increase. The breast is still the most common site for females and it reached a record high number this year.

Death rates per 100 estimated population for Heart Disease and Cancer in Nebraska and the United States for a ten year period are shown in the following table.

	HEART DISEASE		CANCER	
YEAR	NEBRASKA	UNITED STATES	NEBRASKA	UNITED STATES
1976	352.9	338.5	169.9	174.9
1977	337.9	331.6	182.0	178.4
1978	348.4	333.0	188.2	181.9
1979	348.2	330.2	184.0	183.9
1980	349.8	335.2	188.0	186.3
1981	357.5	329.5	187.5	184.3
1982	361.0	326.9	187.6	188.6
1983	351.7	326.3	184.8	188.6
1984	350.2	323.2	192.2	192.1
1985	347.6	323.2	193.5	192.5

Cerebrovascular Disease, the third leading cause of death, decreased by 10.1%, the second year of decrease following two years of increase, giving a rate of 71.3. The national rate also continued to decline and was 64.0 in 1985.

Accidents have been bouncing up and down in the last few years, but this year showed an 8.8% decrease and reached the lowest number in at least sixty-five years. Motor Vehicle Accidental deaths accounted for the largest single category of decrease.

The leading cause of death for males under age 35 was accidents, then heart disease took the lead except for the 40-44 age group where cancer was higher. For females the leading cause of death under age 30 was accidents except in the 10-14 age group where cancer and accidents were tied. Cancer took the lead until age 70 when heart disease became the most frequent cause.

The average age at time of death increased one-half year in 1985 to 73.2 years. Males and females shared equally in this increase with males nudging the 70 year mark at 69.9 years and females increasing to 76.9 years. The oldest Nebraskans dying in 1985 were two women aged 107. The total number of persons who died at 100 or more years of age increased by 27% over 1984 to 103 from 81 in 1984. There were 22 males and 81 females who were at or past the century mark.

MATERNAL, INFANT, AND FETAL DEATHS

Maternal deaths returned to a more normal number of one after the high number of five in 1984. This case was attributed to abruptio placenta.

Infant deaths decreased by 2.0% to 246 from 251 in 1984. However, the infant death rate remained at 9.6 per 1,000 live births. The national rate also was unchanged. A comparison of the state and national rates is shown in the table below.

YEAR	NEBRASKA NUMBER	NEBRASKA RATE	UNITED STATES RATE
1981	268	9.9	11.7
1982	269	10.0	11.2
1983	258	9.8	10.9
1984	251	9.6	10.6
1985	246	9.6	10.6

The infant death rate for whites remained at 9.2, while the non-white rate rose to 13.4 from 13.1 in 1984.

Fifty-seven percent of the infant deaths were of low birth weight, up from 52% in 1984 and equal to 1983, and 32% of them were under 2 lbs. 4 ozs.

Fetal deaths dropped a slight 1.6% to a new low of 186, but the rate increased slightly to 7.3 per 1,000 live births from 7.2 in 1984.

MARRIAGE AND DIVORCE OVERVIEW

Nebraska marriages again decreased in both number and rate between 1984 and 1985, dropping 4.4% to a total of 12,696. The marriage rate per 1,000 population declined to 7.9 from 8.3 in 1984. The number is the lowest since 1966 and the rate is the lowest since 1962. The United States rate also declined from 10.5 in 1984 to 10.2 in 1985.

Marriage data are generally presented based upon the number of marriages occuring in a given area. Through an exchange of records with other states (in situations where Nebraska residents are married outside the state), it is possible to produce marriage data based on the county of residence. Although the exchange is not complete, the resident data are believed to be complete enough to be useful as general indicators. In 1985, resident county marriage rates ranged from a low of 4.1 persons from Logan County marrying per 1,000 population to a high of 36.4 from Grant County. The state resident marriage rate decreased to 14.4 from 15.1 in 1984.

The most frequent age at marriage for both brides and grooms remained at 22 years. This is what it has been for grooms since 1978, but is just the second year for brides.

The percentage of marriages which were first for both bride and groom decreased slightly to 60.7%. The percentage of marriages which were first for neither the bride nor the groom decreased to 18.8% after having increased to 19.9% in 1984. The following table presents the trend in first marriages for the past five years.

YEAR	FIRST MARRIAGE FOR BOTH PARTNERS	PERCENT OF ALL MARRIAGES
1981	8,894	61.9
1982	8,777	61.2
1983	8,449	61.7
1984	8,074	60.8
1985	7,709	60.7

Evidence of the United States as a continuing "melting pot" is given by the fact that approximately 2.9% of the marriages were inter-racial in 1985 compared to 2.5%, 2.3%, and 1.3% in 1980, 1975, and 1970 respectively.

Residents of several foreign countries and all except one state, Delaware, were married in Nebraska in 1985. Both bride and groom were Nebraska residents in 87.4% of the marriages; neither was a resident in 5.5%.

June, the traditional month for marriage, was again the most popular with 1,970 occurring then. January remained the least popular month with 473 marriages. June was slightly higher than last year and January was lower.

Nebraska divorces decreased by 0.5% in number to 6,318 and the rate returned to the 1983 level of 3.9 per 1,000 estimated population. The United States rate also returned to its 1983 level, 5.0, but was an increase rather than a decrease.

The most frequently reported ages at divorce were 24 years for women and 27 years for men. These ages tend to vary from year to year.

More divorces occurred after two years of marriage than any other length of time, and 38.3% of the 1985 divorces occurred less than five years after marriage. More than half of the divorces occurred in marriages of less than seven years.

First marriages were being ended for both partners 62.9% of the time, continuing the downward trend that was interrupted in 1984. Marriages other than first were being dissolved in 17.3% of the divorces, which continues a generally increasing trend.

Some type of settlement was granted in 90.2% of the 1985 divorces. A combination of child support and property settlement was most common (36.6% of cases), followed by property settlement alone (33.4% of cases). Child support was granted in 82.4% of the divorces in which children under 18 were affected. Of the total divorces, 62.2% affected children under 18 years of age. There were an average of 1.9 children per divorce where children under 18 were affected.

POPULATION OVERVIEW

The United States Bureau of the Census estimated the population of Nebraska for 1985 to be 1,605,574, which is essentially unchanged from 1984.

The table below shows natural increase (the excess of births over deaths) and net migration for Nebraska for each decade since 1930 and for part of the current decade.

DECADE	NATURAL INCREASE	NET MIGRATION
1930-1940	112,471	-174,600
1940-1950	139,270	-129,594
1950-1960	201,516	-115,698
1960-1970	147,200	- 73,197
1970-1980	97,420	- 12,928
1980-1985	58,641	- 22,892

Nebraska has consistently experienced out-migration over the period shown, but it had been decreasing steadily. However, during the 1980's out-migration has been on the increase.

Population projections for Nebraska are available from the Bureau of Business Research of the University of Nebraska-Lincoln. County estimates for 1985 will be available from the Nebraska Department of Natural Resources or the U.S. Bureau of the Census. County, town and age group estimates used in rate calculation in this report were developed by the Health Department for that purpose.

Population counts by age are available only for Census years, and the graphic on the facing page shows Nebraska's population in 1980 distributed by age and sex. The large proportion of the population born during the "baby boom" years, as well as the large proportion of elderly, are evident.

DEFINITIONS

BIRTHS

BIRTH ORDER - The number of live born children including the current birth.

BIRTH RATE - The number of live births per 1,000 population.

FERTILITY RATE - The number of live births per 1,000 females 15-44 years of age.

LENGTH OF PREGNANCY - The duration of gestation, in completed weeks, as calculated from the first day of the last normal menses to the date of birth.

LIVE BIRTH - The complete expulsion or extraction of a product of conception from its mother, irrespective of the period of gestation, which, after such separation breathes or shows any other evidence of life such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles, whether or not the umbilical cord has been cut or the placenta is attached and is reportable.

LOW-WEIGHT BIRTH - A live born infant weighing 5½ pounds or less.

OUT-OF-WEDLOCK BIRTH RATE - The number of out-of-wedlock births per 1,000 live births.

SEX RATIO - The number of male births for each 1,000 female births.

DEATHS

DEATH RATE - The number of deaths from all causes per 1,000 population.

FETAL DEATH - Death prior to the complete expulsion or extraction of a product of conception from its mother, irrespective of the duration of pregnancy. Until the pregnancy has reached 20 weeks duration, it is not required that such a death be reported.

FETAL DEATH RATE - The number of fetal deaths per 1,000 live births.

INFANT DEATH - Death of a person under age one year.

INFANT DEATH RATE - The number of infant deaths per 1,000 live births.

MATERNAL DEATH - Death attributable to delivery or the complications of pregnancy, childbirth or the puerperium.

MATERNAL DEATH RATE - The number of maternal deaths per 100,000 live births.

NEONATAL DEATH - Death of a person under 28 days of age.

NEONATAL DEATH RATE - The number of neonatal deaths per 1,000 live births.

PERINATAL DEATHS - Fetal deaths plus neonatal deaths.

PERINATAL DEATH RATE - The number of perinatal deaths per 1,000 live births plus fetal deaths.

RESIDENCE - A person's usual place of abode. This means, in general, the place where one lives and sleeps most of the time. However, when usual residence is in a nursing home or other institution, residence is considered the place where the person lived prior to admission to the institution.

OCCURRENCE - The location in which an event takes place irrespective of the usual residence of persons involved.
